Currier Plastics Adding Magic Extrusion Blow Molding Machines

Auburn, NY Currier Plastics is investing in 2 new Extrusion Blow Molding Machines in the 2nd quarter of 2017. The machines are manufactured by [Magic mp s.p.a](#) and are the custom molder's second and third all electric extrusion blow molding machines that Currier has purchased.

Currier chose the Magic brand after many discussions with several extrusion blow molding machine manufacturers. While the cost, service after the sale and a compact footprint are big contributors in the decision process, possibly more important is the replication of extrusion blow molding resources. "The Magic machines by design will give us more machine capacity because we can use our existing molds, heads and secondary automation," says Steve Crawford, Blow Molding Engineering Manager. "We needed more of this size machine to support our growing business in the medical and consumer care markets," adds Crawford.

The secondary automation includes a take-out system which orients each bottle to an upright position prior to the leak testing and vision inspection systems. The vision inspection system measures the neck dimensions to guarantee the bottles are in specification and that moils and tails detached properly. "This secondary automation is one of the many ways we try to support our existing clients; by constantly improving our processing efficiency and maintaining part quality," adds Crawford. "The manufacturing platforms that we build are key to our development of new partnerships within key markets." Currier is known for providing industry leading design and development services along with investing in top technologies for efficient manufacturing processes.

About Currier Plastics, Inc:

For over 35 years, Currier Plastics, Inc. has been leading the industry in custom plastics molding for markets including medical, personal care, and amenities. We provide our clients with unparalleled communication and project management with our total control approach to form, fit and function for the complete package. Our capabilities include design for manufacturability, injection molding and blow molding with a one team approach providing focus on the quality of your products. Based in the USA with a 128,000 square foot facility in Auburn, New York. ###
