For immediate release

Auburn, NY Business at Currier is on a very aggressive growth trajectory for the foreseeable future. The custom molder has continued to add new business in markets such as healthcare including diagnostic testing consumables and surface sanitization packaging.

"To help manage this growth, we need to be sure that we are placing enough emphasis on the day to day operations as well as the facility requirements and front end operations side of the business development cycle. This is why I am pleased to announce that Livio Ciciotti has accepted the position of Plant Manager," said Ray McKee, Director of Manufacturing.

A former Sergeant in the United States Marine Corp, Livio received the Afghanistan Campaign Medal and Navy Unit Commendation Medal. After the Marine Corp, Livio built his career guiding and developing operational staff at Cintas, Stonyfield Organic and most recently at ThermoFisher Scientific, where he was Plant Operations Manager over their injection blow molding business unit for their healthcare and life sciences industry. With Currier's growth in this sector, Livio's healthcare industry experience will be invaluable to the custom molder.

Livio's personal achievements include Peak Production Award and an Outstanding Achievement Award while at Cintas, Six Sigma Green Belt Certification, School of Infantry Honor graduate and Tactical Small Unit Leaders Course Honor graduate. When asked why he accepted the position at Currier Plastics, "The culture really came through in the interview process. I also like that Currier is privately held and has a strong sense of family."

Family is very important to Livio and his wife Courtney. They enjoy spending time with their 2 children playing golf, going to the movies and are huge Boston Red Sox fans.

Livio joined the team on June 15th and will report directly to Ray McKee, Director of Manufacturing.
